

What is in this document

- 1. The big picture: which module reads and writes which saved data (this page)
- 2. Online orders: storefront and hand-made orders, stock holds, courier, delivery, cancel
- 3. Retail · POS register: shift, sale, checkout, receipt, cash drawer, end of shift
- 4. Wholesale: customer and price list, unpaid invoice, stock hold, delivery, payment, statement
- 5. Return and exchange: one flow for POS, wholesale and online, plus courier returns
- 6. Purchase and suppliers: request, purchase order, receiving, supplier bills and payments
- 7. Inventory: every way stock comes in, goes out, is held or set aside as damaged
- 8. Accounts and settlements: where money sits, partner payouts, the evening check
- 9. Connections fixed: the 13 gaps found in version 1 and how each was closed

Decision

Link added in the fix pass (G-number ✓)

Every arrow works today. Green boxes and labels marked ✓ are the 13 connections (G1–G13) that were missing in the first version of this document and have now been built; page 9 says what each fix does.

Green: the module saves to this data. Blue: it reads it. Bold green ✓: a connection that was missing on 1 Oct and is now made (see page 9). A dash: not related. Accounts are fed

2 · Online orders

All orders · Online orders · Order detail · Create order · Courier returns

An order is made by the customer (order link, storefront) or by staff (Create order, default status Approved). Approving holds the stock at a place the merchant chooses. Delivery takes the stock out; a returned parcel goes through Courier returns.

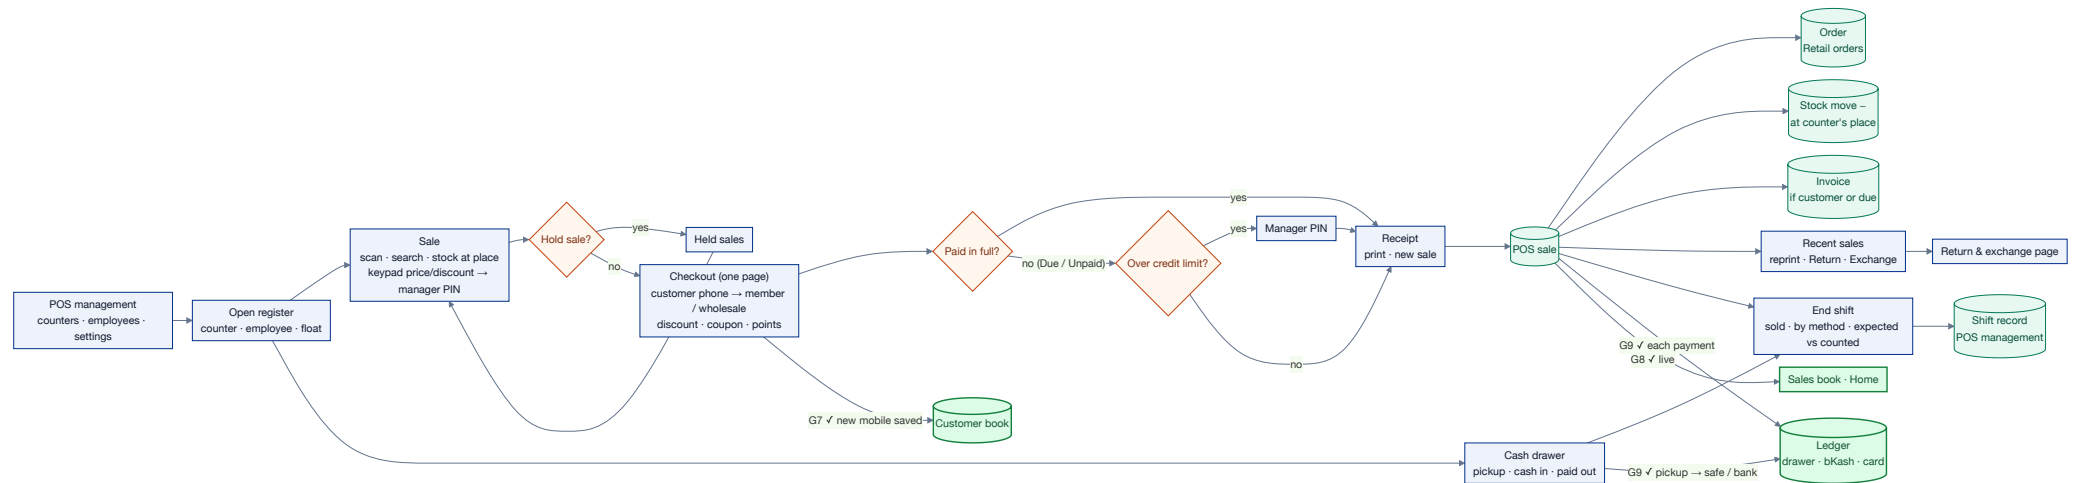

Order detail shows: hold panel by place · duplicate banner · linked invoice/memo number · Return button.

Row click opens that order; status changes are saved.

3 · Retail · POS register

POS register · POS management · Recent sales · End shift

One register for every counter. The shift is opened for a counter and an employee; stock is shown and taken from the place the counter sells from.

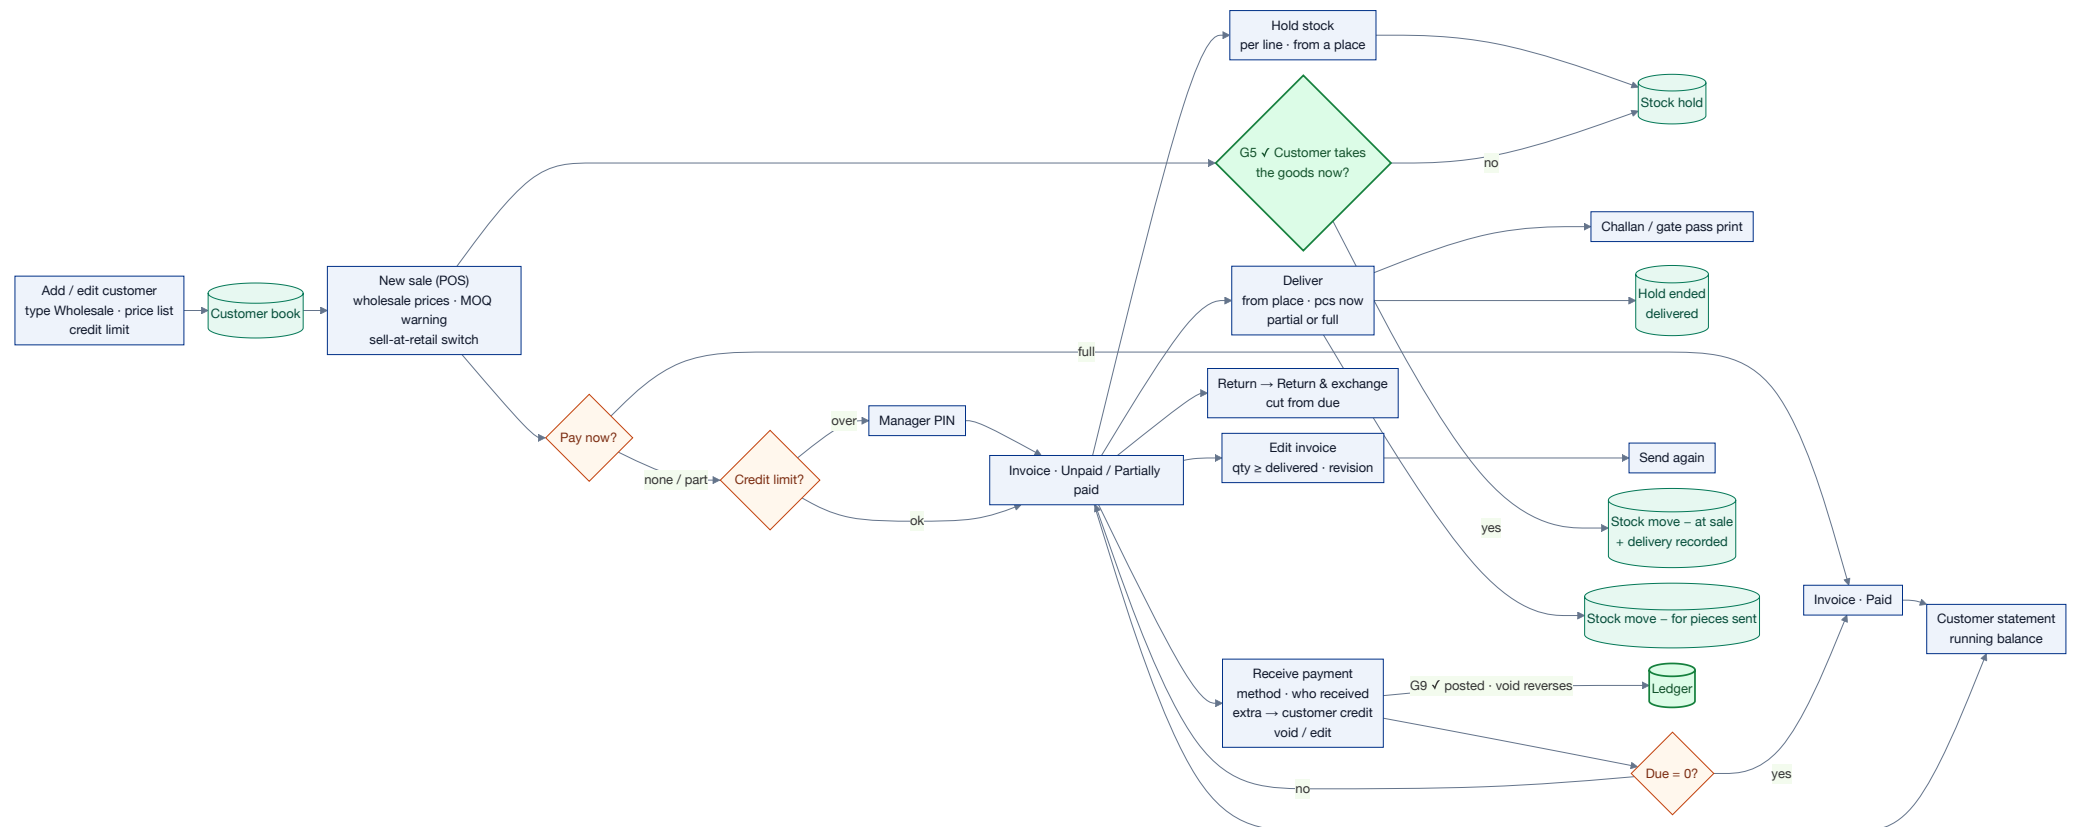

Members get their discount and points automatically from the phone number. Keyboard: F4 checkout, Enter to complete, F1 lists all shortcuts.

4 • Wholesale

Customers • New sale • Invoices • Invoice page • Wholesale orders • Statement

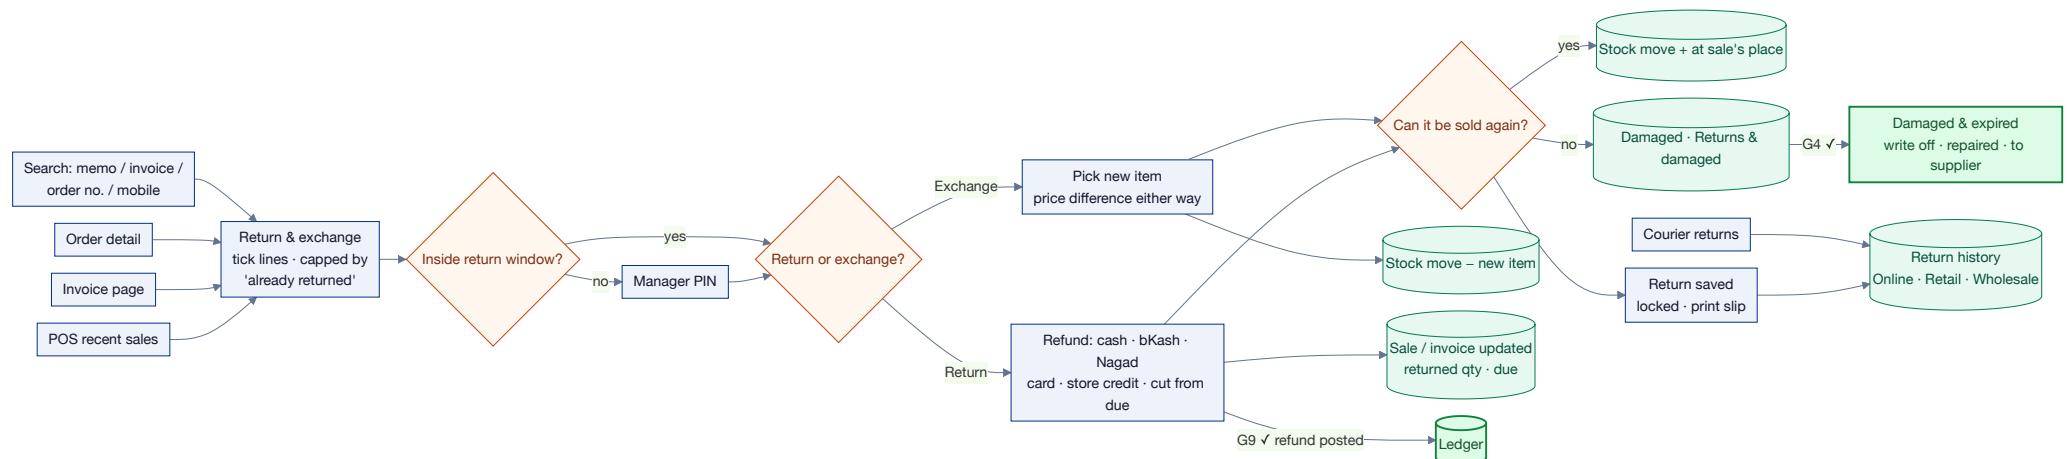

No separate wholesale system: a wholesale customer is picked in New sale, their price list loads, and the sale can end as an unpaid invoice. The invoice is then followed up for stock, delivery and payment.

5 • Return and exchange

Return & exchange · Courier returns · Return history

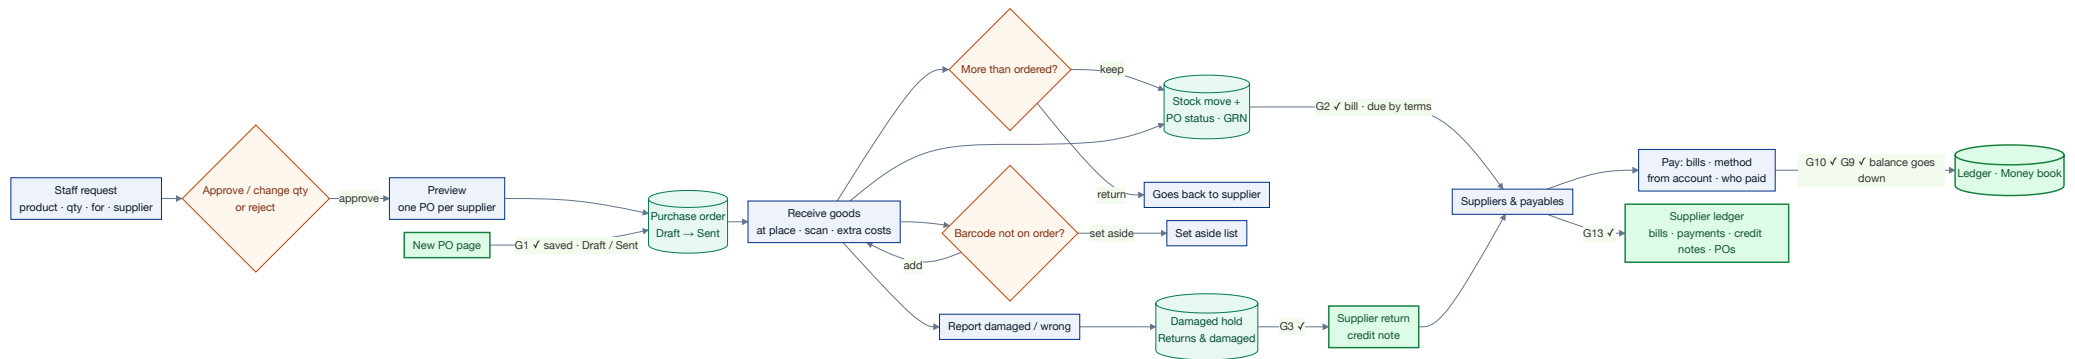

One return page for every channel. The sale is found by number or mobile; lines show what was already returned so the same item cannot come back twice.

6 • Purchase and suppliers

Requests · Purchase orders · New PO · PO detail · Receive goods · Suppliers & payables

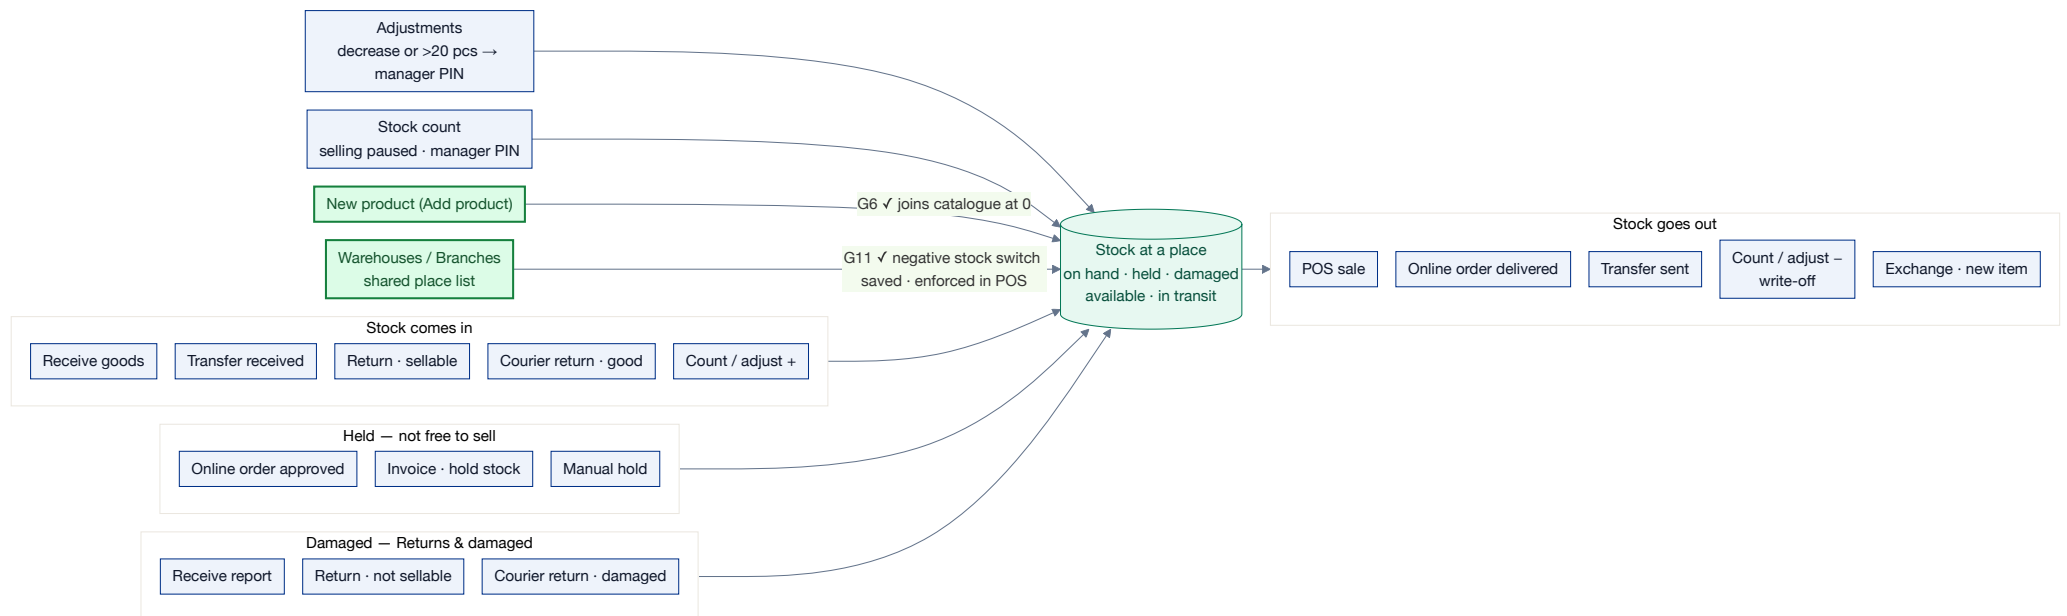

Staff ask for stock, the owner approves, approved requests become purchase orders (one per supplier), goods are received at a place and the supplier is paid.

7 · Inventory · stock at a place

Stock list · Stock holds · Adjustments · Stock count · Transfers · Warehouses

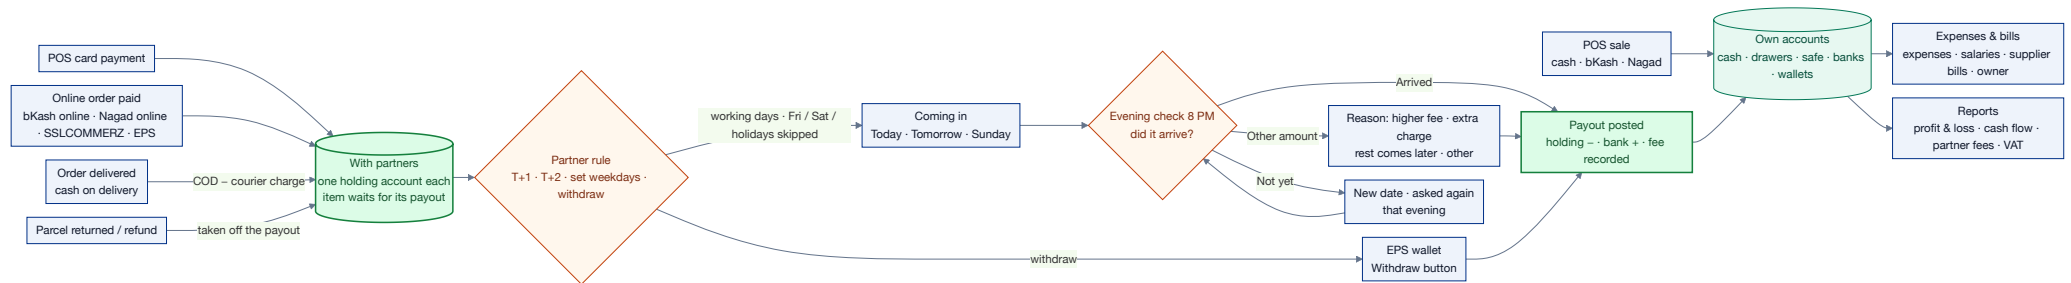

Every place (Central Warehouse, Chattogram hub, Returns & damaged, Dhanmondi, Mirpur, Gulshan-1, Uttara) has: on hand, held, damaged, available (= on hand – held – damaged) and in transit.

8 • Accounts and settlements

[Overview](#) · [Money](#) · [Settlements](#) · [Expenses & bills](#) · [Reports](#) · [Setup](#) · [evening check](#)

Money lands either in the shop's own accounts (cash, drawers, safe, banks, wallets) or with a partner that pays it out later: bKash / Nagad gateway, SSLCOMMERZ, EPS, the card machine, and the couriers' cash on delivery. Payouts count working days only: Friday, Saturday and holidays are skipped, so Thursday–Saturday money arrives together on Sunday.

Partner	Fee (default, editable)	Pays out	Into
bKash · Nagad gateway	1.5% per payment	Next working day	BRAC Bank
SSLCOMMERZ	2.5% (AMEX 3.5%)	In 2 working days	BRAC Bank
EPS	1.8%	Stays until you withdraw it	BRAC Bank
Card machine	1.8%	Next working day	BRAC Bank
Pathao · Carrybee	COD 1% + delivery charge	Next working day	City Bank
Steadfast	COD 1% + delivery charge	Every Sunday and Wednesday	City Bank
RedX	COD 0% inside Dhaka, 1% outside + delivery charge	Next working day	City Bank

The check runs while the app is open (bell + window, and a browser notification if allowed); anything not answered is asked the next time the app opens. Old Accounts pages (Cash book, Money book, Banks, Reconciliation, Expenses ...) now open the page that replaced them.

9 · Connections fixed

All 13 gaps from version 1 are closed

#	Level	Where	Before	Now
G1 ✓	High	Purchase › New PO	Saving only showed a message.	Saved as a real purchase order (Sent, Draft, or waiting for approval) with a “Receive at” place; the real PO number links to its page and it appears in Receive goods.
G2 ✓	High	Receive goods → Suppliers	No supplier bill.	Saving a delivery adds a bill: accepted pieces × PO cost + extra costs, due by the supplier’s terms, linked to PO and GRN.
G5 ✓	High	Wholesale sale + stock hold	Stock counted out twice until delivery.	“Customer takes the goods now” at checkout: yes → stock out + delivery recorded; no → held at the sale place; each delivery takes out only what was sent and ends the matching hold.
G6 ✓	High	Products → stock / POS	New products not in the catalogue.	Saved products join the catalogue (0 stock until received); POS, stock list, holds and counts all read it.
G3 ✓	Medium	Receive report → Supplier return	Damaged/wrong items not listed.	Supplier return lists them by supplier; returning closes the holds, takes the stock out and adds a credit note that lowers the payable.
G4 ✓	Medium	Damaged & expired	Showed demo rows only.	Real damaged stock with write off, repaired → back on sale, and send to supplier.
G7 ✓	Medium	Create order · Order link · POS	New customers not saved.	Saved once by mobile (added from Online order / Order link / POS).
G8 ✓	Medium	Home · Sales book	Demo figures.	Today’s sales, pending orders, low stock, unpaid invoices and damaged pieces are live; Sales book lists real POS sales with filters.
G9 ✓	Medium	Money → Accounts	Nothing posted.	Shared money ledger: POS payments, cash pickups, invoice payments (void/edit reverse), refunds, supplier payments and order advances post to accounts; Cash book, Bank accounts and the new Money book show them.
G12 ✓	Medium	Courier returns	No refund for prepaid orders.	Asks refund amount and method for paid orders; posts it and records it in return history.
G13 ✓	Medium	Supplier ledger	Same demo supplier for all.	Each supplier’s own bills, payments, credit notes and purchase orders with a running balance.
G10 ✓	Low	Supplier pay window	Balances didn’t move.	Accounts and balances come from the ledger; paying lowers the balance.
G11 ✓	Low	Warehouses · Branches	Own place list; switch not saved.	Shared place list; “Allow negative stock” saved per place and enforced in the POS.

Still demo on purpose: supplier bills that existed before 1 Oct, expiry dates, warranty claims and AI calls on Home. Opening account balances are demo figures; every movement after them is real.
